Table 6.A1 Background and contextual characteristics of the data sets

Survey	Year	Region	Countries	N	Valid cases*	# Items	Answer categories	Labelled answer categories	Omega	Cronbach's alpha
UCEP	2008	North America	USA (Utah)	6.697	882	7	5	Quartiles	0,72	0,67
CCES	2008	North America	USA	1.000	949	8	4	All (6)	0,76	0,73
CCES	2012	North America	USA	1.000	835	15	5	All (7)	0,70	0,64
LAPOP	2008	Americas	22 Latin American countries (1)	37.035	28.714	9	7	Extremes only	0,77	0,72
LAPOP	2008	Americas	USA	1.500	1.492	7	7	Extremes only	0,84	0,80
LAPOP	2008	Americas	Canada	2.032	1.911	4	7	Extremes only	0,64	0,60
LAPOP	2010	Americas	18 Latin American countries (2)	30.064	24.128	5	7	Extremes only	0,79	0,76
SNES	2010	Eastern Europe	Slovakia	1.203	879	9	7	Extremes only	0,61	0,55
UDP	2013	South America	Chile	1.805	1.423	11	5	All (4)	0,71	0,64
UDP	2015	South America	Chile	1.302	1.038	12	5	Extremes only	0,85	0,83
WoPo	2014	Western Europe	the Netherlands	631	582	6	5	Extremes only	0,85	0,81
LIVEWHAT	2015	Europe	9 countries (3)	18.368	18.368	8	5	All (5)	0,89	0,88

Note: All data sets are stripped of missing values via complete cases. This means, if an observation contained a missing value for one of the populist indicators in the data set, we excluded it from analysis. The survey in the Netherlands was completed by 631 respondents, but following Akkerman et al. (2014) we also delete all respondents who completed the survey in less than 10mins. Hence, the number of cases and valid cases differs.

(1) This includes 22 countries, namely Mexico, Guatemala, El Salvador, Honduras, Nicaragua, Costa Rica, Panama, Colombia, Ecuador, Bolivia, Peru, Paraguay, Chile, Uruguay, Brazil, Venezuela, Argentina, Dominican Republic, Haiti, Jamaica, Guyana (2009) and Belize. It does not include the USA and Canada.

(2) This includes 18 countries, namely Mexico, Guatemala, El Salvadr, Honduras, Nicaragua, Costa Rica, Panama, Colombia, Ecuador, Peru, Paraguay, Uruguay, Brazil, Dominican Republic, Haiti, Jamaica, Guyana and Belize. It does not include the USA and Canada.

(3) This includes 9 countries, namely France, Germany, Greece, Italy, Poland, Spain, Sweden, Switzerland and the UK

(4) muy de acuerdo, de acuerdo, ni de acuerdo ni en desacuerdo, en desacuerdo, muy en desacuerdo

(5) disagree strongly, disagree, neither, agree, agree strongly

(6) strongly agree, agree, disagree, strongly disagree

(7) strongly disagree, somewhat disagree, neutral, somewhat agree, strongly agree

#  
#  
# General Comment: Below, we detail the code used to create the basic analyses and graphs  
#                   that appear in the chapter. Note, however, that graphics may not look  
#                   identical (in terms of color etc.) because editing of the graphs was  
#                   done at a later stage.  
#  
#  
# How to run the R-Script: The script is written in a way, that three steps ensure it  
# should run without further complications, producing the results and graphs presented in  
# the paper.  
#           STEP 1: Save all the provided datasets in one folder/directory.  
#  
#           STEP 2: Change the working directory in line 37 of this code. This should  
# reflect the path to the folder in which the datasets are saved.  
#  
#           STEP 3: Run the full R-Script. Note that we also highlighted in the code  
# for the figures (see PART 2 of this R-Script) the corresponding figure numbers from the  
# chapter so to facilitate easy comparison.  
#  
#  
#  
#  
#  
#  
#  
#  
#  
##### PREPARATIONS #####  
  
#Clear the working space  
rm(list=ls())  
  
#set working directoy (Enter path for folder in which datasets are stored)  
setwd("ENTER FOLDER NAME HERE")
```

```

# Load necessary R packages (Note: this code ensures that, in case any package has
not
# previously been installed, it will install the package first before loading it
into the library)
packages <- c("mirt", "foreign")
for (p in packages) {
  if (p %in% installed.packages()[,1]) require(p, character.only=T)
  else {
    install.packages(p)
    library(p, character.only=T)
  }
}

#### Step 1: Dataset preparations ####

# Below, we created five datasets, each containing the populism items from the
# different datasets (CCES 2012, SNES 2012, WoPo, LiveWhat, and UDP 2015)

#### 1A CCES 2012 ####

CCES2012 <- read.dta("CCES_2012_STATA12.dta") # analyzing this data will give Figure
6.1

#Variables are not read in as numerical/integer variables. Requires transformation.
The following line
#transfers all variables into integer variables.

CCES2012$BYA401 <- as.integer(CCES2012$BYA401)
CCES2012$BYA403 <- as.integer(CCES2012$BYA403)
CCES2012$BYA405 <- as.integer(CCES2012$BYA405)
CCES2012$BYA407 <- as.integer(CCES2012$BYA407)

#Note: There are lines with missings in the dataset. These cannot be used for IRT
analyses.
#   Rather than removing them manually, the specification "technical =
list(removeEmptyRows=TRUE)"
#   is later used in the analyses to take care of that issue.

#### 1B SNES 2010 ####

SNES2010 <- read.dta("SNES_2010_STATA12.dta") # analyzing this data will give Figure
6.2

#### 1C WoPo (Dutch 2011 Survey Data) ####

df_WoPo <- read.dta("WoPo_STATA12.dta") # analyzing this data will give Figure 6.3

```

```

#### 1D LiveWhat Dataset ####

df_LW <- read.dta("LiveWhat_STATA12.dta") # analyzing this data will give Figure 6.3

#Variables are not read in as numerical/integer variables. Requires transformation.
The following line
#transfers all variables into integer variables.

df_LW$populism_1 <- as.integer(df_LW$populism_1)
df_LW$populism_2 <- as.integer(df_LW$populism_2)
df_LW$populism_3 <- as.integer(df_LW$populism_3)
df_LW$populism_4 <- as.integer(df_LW$populism_4)
df_LW$populism_5 <- as.integer(df_LW$populism_5)
df_LW$populism_6 <- as.integer(df_LW$populism_6)
df_LW$populism_7 <- as.integer(df_LW$populism_7)
df_LW$populism_8 <- as.integer(df_LW$populism_8)

#### 1E UDP 2015 ####

UDP2015 <- read.dta("UDP2015_STATA2012.dta") # analyzing this data will give Figure
6.5

#Variables are not read in as numerical/integer variables. Requires transformation.
The following line
#transfers all variables into integer variables.

UDP2015$P41A <- as.integer(UDP2015$P41A)
UDP2015$P41B <- as.integer(UDP2015$P41B)
UDP2015$P41C <- as.integer(UDP2015$P41C)
UDP2015$P41D <- as.integer(UDP2015$P41D)
UDP2015$P41E <- as.integer(UDP2015$P41E)
UDP2015$P41F <- as.integer(UDP2015$P41F)

##### Step 2: Main Analyses
#####

#Note: Any changes to the figures, e.g. colors etc., were done at a later
#      stage and are not included in this code.

#### 2A - CCES 2012 Analyses ####
